bringing assessment home

PANDAbox
Parent Administered Neurodevelopmental Assessment

**Are you a parent of an infant with Angelman syndrome?
Would you like to support science from home?**

Help us learn how children and families grow over time! The PANDABox study at Purdue University is recruiting families of children 24 months and younger to participate in our at-home research study. Families will complete a series of 3 home assessments, 6 months apart. We are interested in understanding how children's strengths and personalities change with time!

All activities are completed from the comfort of your home. We will ship all materials to and from your home at no cost to you!

Scan to learn more!

Each Session includes:

- Online Survey
- Phone Interview
- Telehealth Assessment
- Full-Day Audio Recording

Compensation:

- Receive up to \$165 in Amazon Gift Cards

Location:

- All sessions are completed from home through a secure video conferencing platform

Are you eligible?

- Parent(s) with a child with Angelman syndrome 24 months old and younger
- Family must speak English and live in the US
